

Kongala Ruben Sunny

Portfolio | GitHub | LinkedIn | +91 7842653386 | rubensunny96@gmail.com

Summary

Computer Science graduate with experience in Java, Spring Boot, Angular, MySQL, and Full Stack Development. Skilled in building REST APIs, scalable web applications, and responsive user interfaces. Strong foundation in software engineering, problem solving, and Agile development.

Technical Skills

Programming Languages: Java, C++, SQL, JavaScript

Frameworks & Technologies: Spring Boot, Angular, REST APIs, Microservices

Web Technologies: HTML, CSS, JavaScript

Databases & Tools: MySQL, Postman, Git, GitHub

Core Concepts: OOP, Data Structures & Algorithms, Collections Framework, Problem Solving

Education

B.Tech in Computer Science Engineering Sri Venkateswara Engineering College, Tirupati	2021 – 2025
Intermediate (MPC) Chandra Reddy Junior College, Nellore	2019 – 2021
Secondary School Ratnam High School, Nellore	2018 – 2019

Work Experience

Software Developer Intern (Java Full Stack – Angular) <i>Infosys</i>	Jul 2025 – Present
- Developed full-stack application features using Spring Boot and Angular. - Built and integrated RESTful APIs with frontend components. - Implemented responsive UI screens, services, and routing. - Collaborated using Git/GitHub and followed Agile practices.	

Projects

MedVault – Healthcare Management System
- Developed a full-stack healthcare management platform using Spring Boot, Angular, and MySQL. - Designed and implemented secure user authentication and authorization using role-based access control (RBAC). - Created RESTful APIs for patient registration, appointment booking, doctor management, and medical record tracking. - Integrated MySQL database with optimized relational schema for efficient data storage and retrieval. - Developed responsive Angular dashboards for patients, doctors, and administrators. - Implemented CRUD operations with validation and exception handling to improve data integrity. - Used Git and GitHub for version control and collaborative development. - Followed MVC architecture and clean coding practices to ensure maintainability and scalability.

Student Marks & Result Evaluation

- Developed a Java-based application to calculate student marks, grades, and overall academic performance. - Applied Object-Oriented Programming concepts including abstraction, inheritance, polymorphism, and encapsulation. - Implemented method overloading and method overriding to improve code reusability and flexibility. - Automated pass/fail evaluation and grade assignment based on predefined criteria. - Designed a menu-driven command-line interface for efficient user interaction and result generation. - Improved code maintainability through modular class design and proper exception handling.
--

Employee Management System

- Developed a Java-based Employee Management System for managing employee information and records. - Implemented functionalities such as employee registration, record updates, searching, and deletion. - Utilized Java Collections Framework including HashSet and TreeSet to store and manage unique employee data. - Applied OOP principles such as encapsulation, constructors, inheritance, and method overriding. - Designed modular and reusable classes to improve scalability and maintainability. - Implemented validation checks to ensure data accuracy and consistency. - Demonstrated effective use of data structures for efficient record management and retrieval.
